ABOUT ME

Web developer with a strong foundation in full-stack development, focused on designing, building, and deploying responsive, data-driven web applications from concept to production. Skilled in creating clean, functional interfaces and reliable back-end systems that solve real operational problems. Writes maintainable code with a practical, detail-oriented approach and a solid grasp of the full development lifecycle. Brings additional experience in GIS and field data collection, adding a data-first perspective and the ability to build web-based mapping tools.

EDUCATION

Eastern Visayas State University | 2023

Bachelor of Science in Information Technology

Thesis: *E-Jeep Mobile based Tracking System*

Eastern Visayas State University | Completed 21 units of graduate coursework

Master of Science in Information Technology (MSIT)

WORK EXPERIENCE

- **Management Information System Staff**

Department of Agrarian Reform | January 2026 - To date

As Management Information System Staff, I design, develop, and deploy full-stack web applications that support the agency's information systems and daily operations – including a DAR learning platform and several online monitoring systems. I build responsive front-end interfaces using React and Vite, backed by Python and Flask services with Supabase for database management and authentication, and streamline internal workflows through Google Apps Script automation. Deploying and maintaining these applications on Vercel, I deliver reliable, data-driven tools that automate manual processes, improve data accessibility, and enable faster, better-informed decision-making across the office.

- **Computer Services Programmer**

National Irrigation Administration | July 2023 - December 2025

As Computer Services Programmer, I developed and deployed full-stack, map-based web applications – including a Farmland GIS web application that improved data accessibility and visualization of regional land assets. Using React, Leaflet, and Vite on the front end with Python and Flask services hosted on Vercel, I built interactive tools driven by real field data. I also performed GPS/GNSS field data collection for precise geotagging and parcellary mapping, turning field findings into high-accuracy map visualizations and spatial analyses that supported organizational goals

SKILLS

- Full-Stack Web Development
- React & Vite
- Python & Flask
- Supabase (Database & Auth)
- REST API Development
- GIS & Web Mapping (Leaflet, QGIS)
- GPS/GNSS Field Data Collection
- Data Analysis & Visualization
